- Mt. Prospect, Illinois
- Rockford, Illinois
- Detroit, Michigan
- Niles, Michigan
- North Muskegon, Michigan
- St. Paul Park, Minnesota

Ethanol is alcohol that is currently made from domestically produced corn or other bio-mass. E85 is a blend of 85 percent ethanol and 15 percent gasoline that may be used by over 3 million vehicles on the road today. During the past 5 years, the demand for E85 has increased ten-fold to about 10 million gallons a year. E85 contains an octane level of 100+, burns cleaner than gasoline, and is a renewable, domestic, environmentally friendly fuel that enhances the nation's economy and energy independence.

E85 vehicles are flexible-fuel-vehicles (FFVs) designed to use either gasoline or a mixture of 85 percent ethanol and 15 percent gasoline. There are an estimated 3.5 to 4.5 million E85-capable cars, light trucks and vans on our nation's roads today.

Based in Findlay, Ohio, MAP is the nation's fifth largest refiner with 945,000 barrels-per-day capacity in its seven-refinery system. MAP's retail marketing system comprises approximately 5,400 locations in 16 states, more than half of which are Marathon brand locations. MAP serves the Midwest and Southeast as a petroleum products marketer with 95 light product and asphalt terminals and access to about 8,400 miles of pipeline. MAP is a limited liability company owned 62 percent by Marathon Oil Company, a wholly-owned subsidiary of Marathon Oil Corporation (NYSE:MRO) and 38 percent owned by Ashland Inc. (NYSE:ASH).

The National Ethanol Vehicle Coalition is the nation's primary advocate dedicated to the use of 85 percent ethanol as a form of alternative transportation fuel. It is a coalition of corn growers, ethanol producers and auto manufacturers based in Jefferson City, Missouri. For more information, visit [www.e85fuel.com](http://www.e85fuel.com).
